CISC3325 – Project 2

Find and analyze a known cyber-attack. Cover the following aspects:

1. What was the vulnerability that was exploited?
2. What was the threat model?
3. What were the attack details?
4. Describe the incident management, damage and any ethical and legal considerations that were involved in the incident response.

Students should prepare a typed report – up to 4 pages -- and a class presentation.
